

# Company Milestones

Curated attachment that mirrors the seeded history page narrative.

- Early delivery centered on utility billing and field metering workflows.
- Later programs expanded into mobile work, revenue oversight, and smart water operations.
- The history page now links to a richer local document instead of placeholder copy.
- Keeps repo-delivered seeded content coherent for importer demos and public pages.

Stable local history pack for the Bigfoot site seed.

# What Stayed Constant

Themes reflected throughout the seeded content set.

- Operational practicality for utility staff under real billing and service pressure.
- Tight coupling between office workflows, field execution, and management visibility.
- Preference for curated local demo assets when remote files are ambiguous or mismatched.
- Slug stability preserved so importer behavior stays unchanged.

Task 6 curated asset for [/about/history](#).
