

Technical Reference

Capabilities represented by the billing suite attachment.

- Supports account master data, tariff configuration, billing cycles, and payment channels.
- Highlights exception queues for validation, audit, and reconciliation workflows.
- Pairs with the seeded revenue-focused product copy and public download tests.
- Stored locally to prevent overwrite from mismatched remote image endpoints.

Curated attachment used by the importer for the billing-suite product.

Implementation Considerations

Rollout patterns that fit the seeded site content.

- Normalize customer and meter data before migrating billing rules.
- Train cash office, service desk, and audit teams on shared exception handling.
- Use staged cutovers for bills, receivables, and mobile payment reconciliation.
- Maintain the stable slug and local asset path expected by current tests.

Task 6 document refresh for repo-delivered imported content.
