

DMA Lite Brochure

Night flow + district leakage monitoring for utility operations teams.

- Unifies district metering, minimum night flow analysis, alarms, and work orders.
- Highlights leak-priority zones so field teams can focus on abnormal districts first.
- Supports staged rollout from pilot DMA zones into city-wide governance programs.
- Designed to keep public product pages stocked with a meaningful local brochure file.

Use this brochure as the repo-delivered local asset for `/products/dma-lite`.

Recommended Operating Flow

From signal capture to post-repair validation.

- Collect district flow, pressure, and meter boundary updates each night.
- Compare observed minimum night flow against historical and seasonal baselines.
- Assign field verification packs to crews with district maps and anomaly windows.
- Close the loop with repair outcomes, savings estimates, and monthly review snapshots.

Curated for importer tests that expect a stable brochure asset with real content.
